

Advanced Artificial Intelligence Research Laboratory

The Advanced Artificial Intelligence Research Laboratory focuses on cutting-edge research in Artificial Intelligence, Machine Learning, Computer Vision, and Natural Language Processing. The lab works on both theoretical foundations and real-world applications in healthcare, smart cities, and autonomous systems.

The lab currently has 18 researchers including senior researchers, PhD students, and research interns. There are 6 ongoing projects related to AI, Robotics, and Data Science.

Our infrastructure includes high-end GPU servers, cloud computing platforms, and access to an HPC cluster for large-scale experiments. The equipment level of the lab is high and the funding is medium, supported by national and international research grants.

The laboratory actively collaborates with other universities, industry partners, and government research centers. We are open to collaboration in domains such as Cybersecurity, Bioinformatics, and Internet of Things (IoT).
